

Talk: DECOMPOSITION OF TENSORS AND GEOMETRY

Speaker: Luca Chiantini – UFFICIO (Dipartimento di Ingegneria dell'Informazione e Scienze Matematiche)

Abstract: Rank 1 decompositions of tensors have a natural description as finite sets of points in a sub-variety of a linear space. I will discuss the geometric interpretation and I will illustrate how one can use geometric methods and tools to analyze properties of generic or specific tensors, both in the general or in the symmetric case.
